

## M/V DREAM

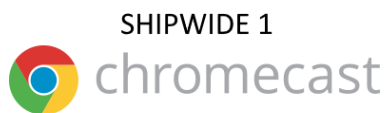

# CENTRAL SOURCES

UPDATE SEPTEMBER 2021

There are new Central Sources added to the terrestrial channels and radios.

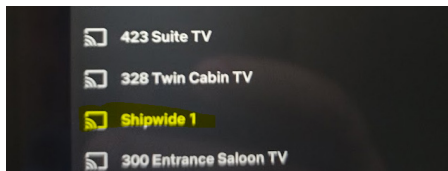

The first source is a ship-wide Chromecast that allows ship-wide streaming of video and audio through Chromecast from Android and Apple devices, if supported, including but not limited to Netflix / Spotify / Plex services which are used onboard.

The second source is also a Chromecast connected to the same encoder for Owner's leisure and there is also a new AirPlay channel that uses the existing Shipwide AirPlay allowing streaming of video and audio to areas where a local amplifier does not exist, such as External Saloons 443 and 300.

### Chromecast

We now have a central Chromecast named SHIPWIDE 1 (more to be added) from the **Dream Guest Wi-Fi**. From the Crestron iPad go to **Watch → TV → Terrestrial** and select SHIPWIDE 1 Chromecast.

From any supported application press the cast button  and select Shipwide 1. This stream can be viewed anywhere on the ship and can be controlled from **Dream Guest Wi-Fi** connected devices. Allow some time for the device to connect and the stream to commence. Then the movie can be controlled from the entertainment device.

### Airplay

The Apple TV previously used as Shipwide Airplay radio also has been added as TV channel allowing external areas that have a TV to take advantage of ship-wide IPTV streaming and view streamed video even without a local amplifier. From the Crestron iPad go to **Watch → TV → Terrestrial** and select Airplay. Ship-wide Airplay is controlled from **Dream Guest Wi-Fi**.

From Entertainment press Airplay or Bluetooth button and select Shipwide Airplay.  
**NOTE: NETFLIX IS NOT SUPPORTED BY AIRPLAY FUNCTION ANY MORE ONLY VIA CAST**
